

Manufacturer’s Certification for Compliance with American Recovery and Reinvestment Tax Act of 2009

Purpose of This Document

This Certification Document is intended to provide consumers and contractors installing Concord window films with information regarding product qualification for federal tax credits under the American Recovery and Reinvestment Tax Act of 2009 (ARRA) for energy efficiency purposes.

Name and Address of Manufacturer

Concord Window Films
82 Mill Plain Road
Danbury, CT 06811
www.concordwindowfilms.com

Identification of Component

Concord solar-control window films when used as an insulation material or system designed to reduce heat gain in a home.

Components Qualifying for Federal Tax Credits under the ARRA.

See the attached list of Concord solar-control window films that qualify as Eligible Building Envelope Components for various window, skylight, and door glass types and climate zones.

Instructions

1. For each existing window, skylight, or door under consideration, identify the glass type as either: (a) Single Pane Clear or Tinted, (b) Dual Pane Clear or Tinted, (c) Dual Pane Low-e Clear or Tinted, or (d) Dual Pane Solar-Control Low-E Clear or Tinted.
2. Determine your climate zone from the map on page 3.
3. Use the table on page 4 to determine qualifying products for the combination of window type and climate zones determined above.

How to determine if dual pane clear, dual pane low-e clear, or dual pane solar-control low-e clear, for windows that appear to be clear glass:

1. Take a BTU meter (ACT 1400 or ACT 1415) reading outdoors on a clear sunny day on an exposure facing the sun. Move the BTU meter until you obtain a maximum reading. This is Reading 1.

2. Take a BTU meter reading indoors on the same day, on the same exposure, approximately 1 foot from the window. Move the BTU meter until you obtain a maximum reading. This is Reading 2.

Note Value of Reading 1 divided by Reading 2.

If this Value is greater than 0.74, use dual pane clear.

If this Value is between 0.68 and 0.73, use dual pane low-e clear.

If this Value is less than 0.68, use dual pane solar-control low-e clear.

Other Notes

1. Qualifying products can only be applied to windows, skylights, or door windows with wood or vinyl frames. Windows with aluminum frames do not qualify.
2. Dual Pane Clear or Tinted includes single pane glass with an interior or exterior storm pane of glass. Again, entire window and storm window must be composed of wood or vinyl frames, no metal frames allowed.
3. The presence or absence of dividers, screens, exterior or interior shading devices (blinds, shades, curtains, etc.), shading from trees, bushes, adjacent buildings or homes, etc. or shading from overhangs does not affect qualification status.
4. The compass orientation of windows, doors, or skylights also does not affect qualification status.
